DETAILED ACTION

Abstract

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

For this application, the abstract is more than 150 words.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 104, 105, 114, 119, 120 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

With respect to claim 104, the dependency status of claim 104 is ambiguous. It is not clear if claim 104 is independent claim or if claim 104 is dependent on claim 91. If claim 104 is an independent claim, the format for writing independent claim is improper,

Art Unit: 2877

this cause confusion in determining fee payment. If claim 104 is the dependent claim, claim 104 is rejected under 112 4th paragraph for failing to further limit claim 91.

With respect to claims 105,114,119,120, refer to discussion in claim 104 above for the same reasons.

Allowable Subject Matter

Claims 91-103,106-113,115-118,121-123 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: Prior arts of record does not disclose a surface position detection device for detecting a surface position of a detection target surface. The system comprises: a light beam deflector, provided, at least, either in an optical path of the projection optical system or in an optical path of the light-receiving system, having an even number of reflection surfaces to allow an incident light beam to exit at an angle that is not parallel to an entry angle of the incident light beam as disclosed in claims 91,106.

Response to Arguments

Applicant's arguments filed 02/23/2004 have been fully considered but they are not persuasive.

With respect applicant's argument regarding to claim 104, refer to discussion in Claim ejections - 35 USC § 112 above

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
